

STA Media Boilerplate

As the leading authority for structural timber build systems, the Structural Timber Association (STA) is recognised for their technical excellence, superior knowledge and leading standards. With over 950 members, the STA is the UK's leading organisation representing the structural timber sector, a sector now valued at over £1 billion, and associated supply chain companies.

Their mission is to support and facilitate the UK construction industry to increase the use of structural timber across housing, public sector and commercial sectors, contributing to the housing targets of 300,00 per year, while delivering value and increased build quality, through fast, sustainable, low carbon construction. Over the past 5 years 198,429 timber frame homes have been built in the UK, a number which the STA seeks to increase in line with housing targets.

The STA actively work to promote structural timber through innovation and accreditation while raising the bar on quality standards, health and safety, skills training and technical knowledge. Their goal is to drive increased use of MMC and offsite manufacture for the benefit of all stakeholders. Additionally, the STA works to influence legislation and regulation, and support the objectives of the structural timber sector as a whole. Having played a key role in the Government's Timber in Construction Policy Roadmap development, the STA continues to spearhead its implementation.

STA Assure is the STA's Quality Assurance Scheme that provides confidence in the use of structural timber and determines member competency and compliance, providing solid reassurances to the construction community that its members meet or exceed current legislation and regulatory requirements.
